

HEMANTH ATTHULURI

Profile

Full-Stack Developer with over two years of practical experience designing and developing secure, scalable applications using React, Firebase, and modern cloud technologies. Skilled in RBAC systems, real-time databases, automated workflows, and responsive UI. Dedicated to delivering robust, production-ready software.

Education History

- BITS-Pilani Computer Science**
Aug 2024 – Present
Under Graduate
- NIAT – Nxtwave Institution**
of Advance Technologies
Aug 2024 – Present · Skill Program

Languages

- English
- Telugu

Skills

- UI/UX Designer
- Full-Stack Development
- Project Management
- UI/UX Design & User Experience Optimization
- Project Leadership & Team Coordination
- System Architecture & Backend Design

Work Experience

Student Web Developer, NIAT | 2024 – Present

- Building static and dynamic web applications from scratch
- Developing responsive websites using modern web design principles

Technical Skills

- HTML, CSS, JavaScript
- React.js
- Node.js
- SQLite
- GIT
- Basic DSA
- REST APIs
- Responsive Web Design

Projects

HOAS – Hostel Operations Accountability System | Dec 2024 – Present

Stack: React 19 · Firebase (Firestore, Auth, Cloud Functions v2, Storage, FCM) · Node.js 22 · Tailwind CSS 4 · Vite · Express · PDFKit · i18next · Framer Motion

Enterprise-grade hostel management platform for educational institutions. Architected a four-tier role hierarchy (Owner → Management → Warden → Student) with dedicated dashboards per role, real-time Firestore sync, glassmorphism UI, and full dark / light theme support.

- Role-Based Auth & Approval Workflow** — Implemented RBAC via Firebase custom claims with multi-provider auth (Google OAuth + Email/Password). Registrations enter a multi-level approval flow, preventing unauthorised access across all roles.
- Real-Time Notification System** — Engineered 16 Firestore snapshot listeners + FCM push notifications covering every event across all 4 roles, with per-user preference toggles and a background service worker for offline delivery.
- Serverless Backend (Firebase Cloud Functions v2)** — 10 callable functions and 2 HTTP endpoints for user management, cascade-delete, server-side PDF/JSON report generation (PDFKit), and bulk Excel student import (XLSX + Nodemailer).
- Full Dashboard Suite — 20+ Pages** — Complaint management with dispute/escalation workflows, leave requests (7 types), CRUD announcements with priority levels, Recharts analytics, Shepherd.js onboarding tours, and Recharts data visualisation charts for admins.
- Project Scale** — 11 development phases · v2.1.0 · 27+ pull requests · 28 documentation files (architecture, Cloud Functions API, deployment checklist, Firebase emulator setup, context design guide).
